

## Antifreeze

Antifreeze serves several functions: it protects the engine against frost damage, lubricates moving components and protects against overheating.

Different than with motor oils, there are no industrial standards, but instead the specifications of the respective vehicle manufacturers. The most well-known are, for example, Mercedes-Benz, Opel, Ford and MAN. In order to avoid the accidental mixing of different types, the antifreeze types have different colors.

LIQUI MOLY offers a series of antifreezes:

### Can be used alternatively for G11

- KFS 2000
- KFS 11
- Universal antifreeze GTL 11: a finished mixture that can be added directly into the cooling container

### Can be used alternatively for G12

- Universal antifreeze GTL 12: a finished mixture that can be added directly into the cooling container

### Can be used alternatively for G12+

- KFS 2001 Plus
- KFS 12 Plus

### Without specifications

- Long-term cooling system protection: a simple and economical antifreeze
- KFS 2002++: successor of the KFS 2001 Plus, can be mixed both with silicate-free antifreezes and antifreezes containing silicate
