

## White Maintenance Spray – a Neat and Tidy Thing

LIQUI MOLY Wartungsspray Weiß (white maintenance spray) protects from corrosion and lubricates. It is the solid lubricant that is so special about it. Many lubricants apply an oily film. This film may not only smell unpleasantly but may also cause stains. For example at vehicle's door hinges: conventional lubricants often leave trails of dripping oil at the framework. If water gets at the hinges, it rinses a little bit of the oil out every time and the stains return.

LIQUI MOLY Wartungsspray Weiß (white maintenance spray) is different. The solvent creeps in even the tightest openings and afterwards evaporates. What remains is the white solid lubricant. It is very adhesive und stays where it is. That is why the white maintenance spray is a very clean and effective lubricant.
